Jason Page

B.S. Computer Science, University of Oregon (June 2027)
Seeking full-time Software Engineer roles starting Summer 2027
jasonepage@gmail.com • 971.284.6474 • jasonepage.github.io • github.com/jasonepage • linkedin.com/in/jasonepage

SKILLS

Languages: Swift, SwiftUI, TypeScript, JavaScript, Python, C/C++, SQL, HTML/CSS. Mobile: iOS, iPadOS, macOS, CloudKit, StoreKit, Screen Time / Family Controls, CryptoKit, passkeys, Apple Intelligence, TestFlight, App Store release. Web/Data: React, Next.js, Node.js, PostgreSQL, Supabase (migrations, RLS, Edge Functions), REST APIs, Leaflet. Tools: Docker, Git/GitHub, Linux/Bash, Xcode, Render, Cloudflare. AI-assisted development with Claude and Gemini; design docs written before code.

EXPERIENCE

Independent iOS & Web Developer self-employed — Eugene, OR 2024 – Present

- Designed, built, shipped, and maintain 7 production apps across iOS and web as a sole developer, from first prototype to App Store release and ongoing updates.
- Build with AI-assisted coding tools every day: rapid prototyping, debugging, and reviewing AI-generated code for correctness, security, and maintainability before it ships.
- Run production automations end to end: scheduled workers, API integrations, data pipelines, and reporting views, all documented so someone else can maintain them.

Council Treasurer & Member Confederated Tribes of Grand Ronde Nov 2016 – Sep 2020

- Youth representative to the tribal council: brought student perspectives to council meetings and supported education and cultural preservation initiatives.
- Managed the annual student-council budget: tracked expenditures, prepared funding proposals, and allocated resources for cultural events and youth programs.

PROJECTS — 7 APPS SHIPPED AS SOLE DEVELOPER (IOS + WEB)

Seal encrypted dead man's switch letters and passwords (iOS) — sealmessenger.com — github.com/jasonepage/seal — Swift, CryptoKit, CloudKit, passkeys — open source (MPL-2.0), in App Store review

- End-to-end encrypted vault for the messages and secrets your family needs if something happens to you; no backend at all, keys never leave the device.
- Built with zero third-party dependencies; check-ins via Face ID and hardware security keys.

Wick daily word game scored by meaning (iOS + web) — guesswick.com — App Store, 5.0 stars — Swift, Apple Intelligence, Gemini API

- Guesses are scored by semantic closeness, not letters; v3.3 approved October 2026.
- AI layer: iPhone uses the Gemini API or on-device Apple Intelligence; web uses Gemini; localized across five languages.

MakMak recipe saver and meal planner (iOS + web) — makmak.app — App Store — Swift, SwiftUI, CloudKit, StoreKit

- AI import pulls clean recipes from TikTok, Instagram, YouTube, or any link; 'Adapt any recipe' rewrites dishes to fit diet, portions, or protein goals.
- Cook Mode with lock-screen timers, meal plans, and aisle-sorted grocery lists; Pro subscription; v3.1 approved October 2026.

Birthed "on this day" time machine + daily curation game (web) — birthed.app — TypeScript, Node.js, PostgreSQL, Docker

- Runs a scheduled worker every 15 minutes importing feeds and verifying cited sources into Postgres, with versioned migrations and row-level security.
- Bakes 366 date pages at build time and serves them with no database connection; 550+ commits as sole developer.

Nanitch map of hot springs, saunas, and cold plunges (web + iOS) — nanitch.com — JavaScript, Leaflet, PostgreSQL

- Moderated map of 10,500+ spots imported from OpenStreetMap across three continents; human review on every submission.
- iPhone app live on the App Store; v1.3 in review October 2026.

Pawl app blocker with a physical key (iOS) — getpawl.com — Swift, Screen Time, Family Controls

- Blocks any app or website you choose; unlocking requires a physical USB-C security key plus a 15-minute cooldown.
- v2.1 submitted to the App Store October 2026.

Progressive Gin rummy card game (iOS) — progressivegin.com — Swift — App Store, 5.0 stars

- Free gin rummy with sharp AI opponents; no ads or gameplay gating; v1.5 submitted October 2026 with five in-app purchases.

Also built: Illahee (illahee.app), a Chinuk Wawa language-learning app developed for the Confederated Tribes of Grand Ronde Language Program, and Stargazer, a night-sky roll-and-write puzzle game.

EDUCATION

B.S. Computer Science, June 2027 — University of Oregon, Eugene, OR

Fall 2026 coursework: Computer Networks, AI Software Engineering, Data Center Systems Seminar, Accounting.
